

Brain Injury Protocol for Kangen Water

by Dr. Peggy Parker

Autistics and brain injury of any kind will have a **compromised blood brain barrier**. This also includes *Parkinson's, Multiple Sclerosis, Traumatic brain injury, Post Traumatic Stress, Multiple Chemical sensitivity, EMF* (electromagnetic field) *poisoning, Alzheimer's, Dementia*, etc. A blood brain barrier compromise comes from any kind of trauma to the brain whether it is mechanical, chemical, or emotional. It is because of a blood brain barrier not functioning normally that those with brain injury, autism, etc., should not begin with full doses of the Kangen water.

The high negative ORP, Oxygen, and ability of the water to reduce inflammation and neutralize free radicals quickly can cause those with a blood brain barrier compromise to get too much Detox, too fast.

Below is a protocol for anyone with brain injury to start using the water safely and give them the best chance to avoid uncomfortable Detox symptoms. If there is any exacerbation of symptoms or regression in behavior then back off and just do the 7.0 Kangen water.

Child 1-12 years: The Goal is to drink total amount of water up to or a little more than one's body weight in ounces.

Take this protocol and add 7.0 neutral water to the ounces of 8.5pH water each day.

Day 1: 1 oz 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Day 2: 2 oz 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Day 3: 3 oz 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Day 4: 3½ oz of 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Day 5: 4 oz of 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Day 6: 5 oz of 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Day 7: 6 oz of 8.5 Kangen water 3x a day; drink 7.0 up to body weight in ounces in between times

Continue: Keep adding 1 oz of 8.5 a water a day until you get to the number of ounces that equals the body weight. Keep balancing the 8.5 with amount of 7.0 water to equal the body weight.

When you are able to drink all 8.5 water in a day and no 7.0 water then start with the same protocol adding 1 oz of 9.0 and the rest 8.5 Keep doing both waters, building up in the same manner to all 9.0 water. Do the same for building up to the 9.5 water.
